Everything For
Your Laboratory

SENTEK

Sentek was established in 1991, specifically to manufacture a comprehensive range of electrochemical sensors for both laboratory and industrial applications.

Products include pH Electrodes, Reference Electrodes, Steam Sterilisable, Autoclavable pH Electrodes, Metal Electrodes (ORP), Conductivity Sensors, Ion Selective Electrodes, Temperature Probes and Dissolved Oxygen Probes.

We have been dealers for Sentek for many years and their flexibility and attention to detail and quality mean their products are ever more popular. They can manufacture equivalents to most branded electrodes meaning you pay less & the electrodes often last longer!

The most popular electrode is the P14/BNC - a plastic bodied general purpose combination electrode with a BNC connector. At this price you can order one as a spare as well. Why not give it a try instead of your normal manufacturer branded electrode?

Combination and Mono ISE electrodes are available at greatly reduced prices especially when compared to other brands such as Metrohm. If you want an electrode quoting for, just let us know the brand and the part code if you have it together with a brief description and details of the plug eg BNC or DIN.

Also available are a wide range of Industrial Electrodes and probes. These probes work to higher temperatures and pressures and in aggressive environments.

Also available...

Jenway pH meters, conductivity meters, spectrophotometers, flame photometers
WTW brand pH meters, rugged portable meters as well as bench type meters.

a xylem brand
