

ROOM CLIMATE MONITOR

Valid until 30th June 2021

QUOTE 'EBRO21'

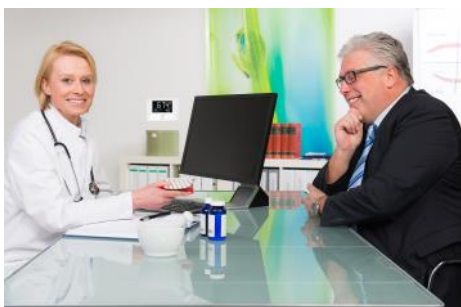

Breathe deeply **-ebro-**

- Reducing the virus load
- Increasing the productive efficiency
- Measuring wellness

Frequent venting e.g. of offices, laboratories & classrooms reduces the virus load in the air dramatically. This lowers the risk of **diseases** such as Covid-19 and influenza. The **Technical University Berlin** found out that there is a correlation between the virus load and the CO2 value in the air. Therefore, they recommend using devices such as the **RM 100** to determine, when to vent again.

With an increasing CO2 value, the **productive efficiency** declines, while the virus load rises. The room climate monitor **RM 100** helps evaluating the quality of the room climate **objectively**.

The RM100 measures **air temperature** and **humidity**, as well as the **CO2 value**.

The measurements are clearly visible in the **large, illuminated display**. In addition, three **LEDs** indicate the CO2 value in the air as good, medium or bad, respectively. An audible alarm can be set too when it's time to vent.

The monitor also detects high air humidity which can lead to **mould formation** and possibly **corrosion**. The room climate monitor **RM100** helps detecting excessive air humidity **in good time**.

Ebro RM100 Room Climate Monitor

ONLY £123.50

Order before 30th June
